

Updating an existing installation of LandStar8 (or Landstar 7)

Date: 18 December 2023, fn: FAQ_LS8_UpdatingDeployment_r001.docx

Description

Step-by-step instructions on how to update an existing LandStar deployment to the latest version follow.

Exit LandStar

If LandStar is running, or is minimized and running, click the back button until Landstar asks:

Click on Exit.

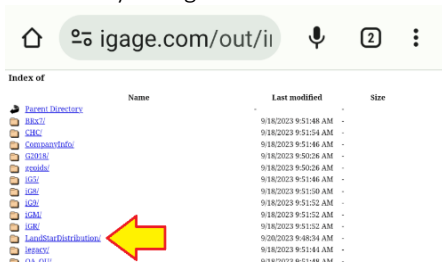

Updating LandStar

Open a browser on the Android device where LandStar is installed and navigate to igage.com. Make sure you are viewing the iGage website and not a search engine result, there will be a large iGage logo in the upper left corner:

Find the link to [Out](#) on the top gray link bar and click [Out](#).

A web directory listing will be shown:

Click the link [LandStarDistribution](#):

Click the link [LatestVersion](#) or [PreReleaseVersion](#) as desired. Most new features are placed in the [PreRelease](#)

bucket long before they are released to the **LatestVersion** bucket.

Find the highest build number, or the desired build number **.apk** file in the folder. Click on it.

The file will begin to download:

After the file downloads:

Click on **Open**.

This message may be displayed:

If it is: click on **Settings**:

Slide the **Allow from this source** to the right. Then click on the **Back** button:

Click Update.

Wait while LandStar is installed and deployed.

Finally, when the installation completes:

Click on Open.
