

Adding a Custom Antenna File to TBC / SPSO

Date: 6 July 2015 By: Mark Silver, <u>ms@igage.com</u>

Download the installer: "setup_X900S-OPUS_CustomAntenna_R001.exe"

Run the installer as an administrator, i.e. you must right-click on the file and choose `Run as Administrator'.

After you run the tool, use the Windows Explorer to look in the folder: C:\Program Files (x86)\Common Files\Trimble\CustomConfig

Right-click on the 'CustomConfig.reg' file and choose 'Merge' (or just double-click on it.) You will be prompted to confirm the merge. This operation adds the following key:

Ň	Registry Editor – 🗆 🗙					
<u>F</u> ile	<u>Eile Edit View Favorites H</u> elp					
	AduntarConfiguration	^	Name	Туре	Data	
			ab (Default)	REG_SZ	(value not set)	
	- DpticalConfiguration			REG_SZ	C:\Program Files (x86)\Common Files\Trimble\CustomConfig\	
	Share	~				
<	>		<		>	
Computer\HKEY_LOCAL_MACHINE\SOFTWARE\Trimble\CustomConfigFiles						

Once these two operations have been completed, a new antenna type "IGAGE" "X900S-OPUS" will be available, and automatically selected when RINEX files from the X900S are imported.
